

# BELT DRIER

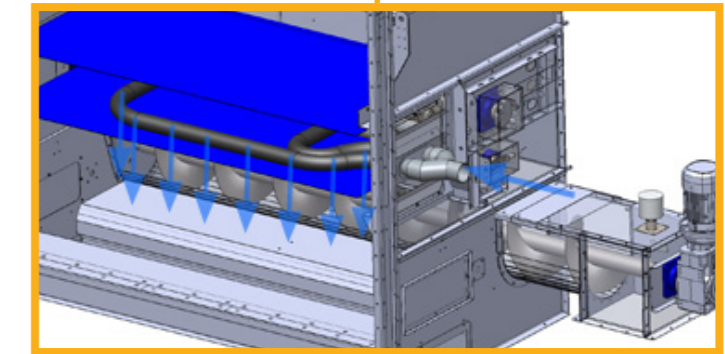

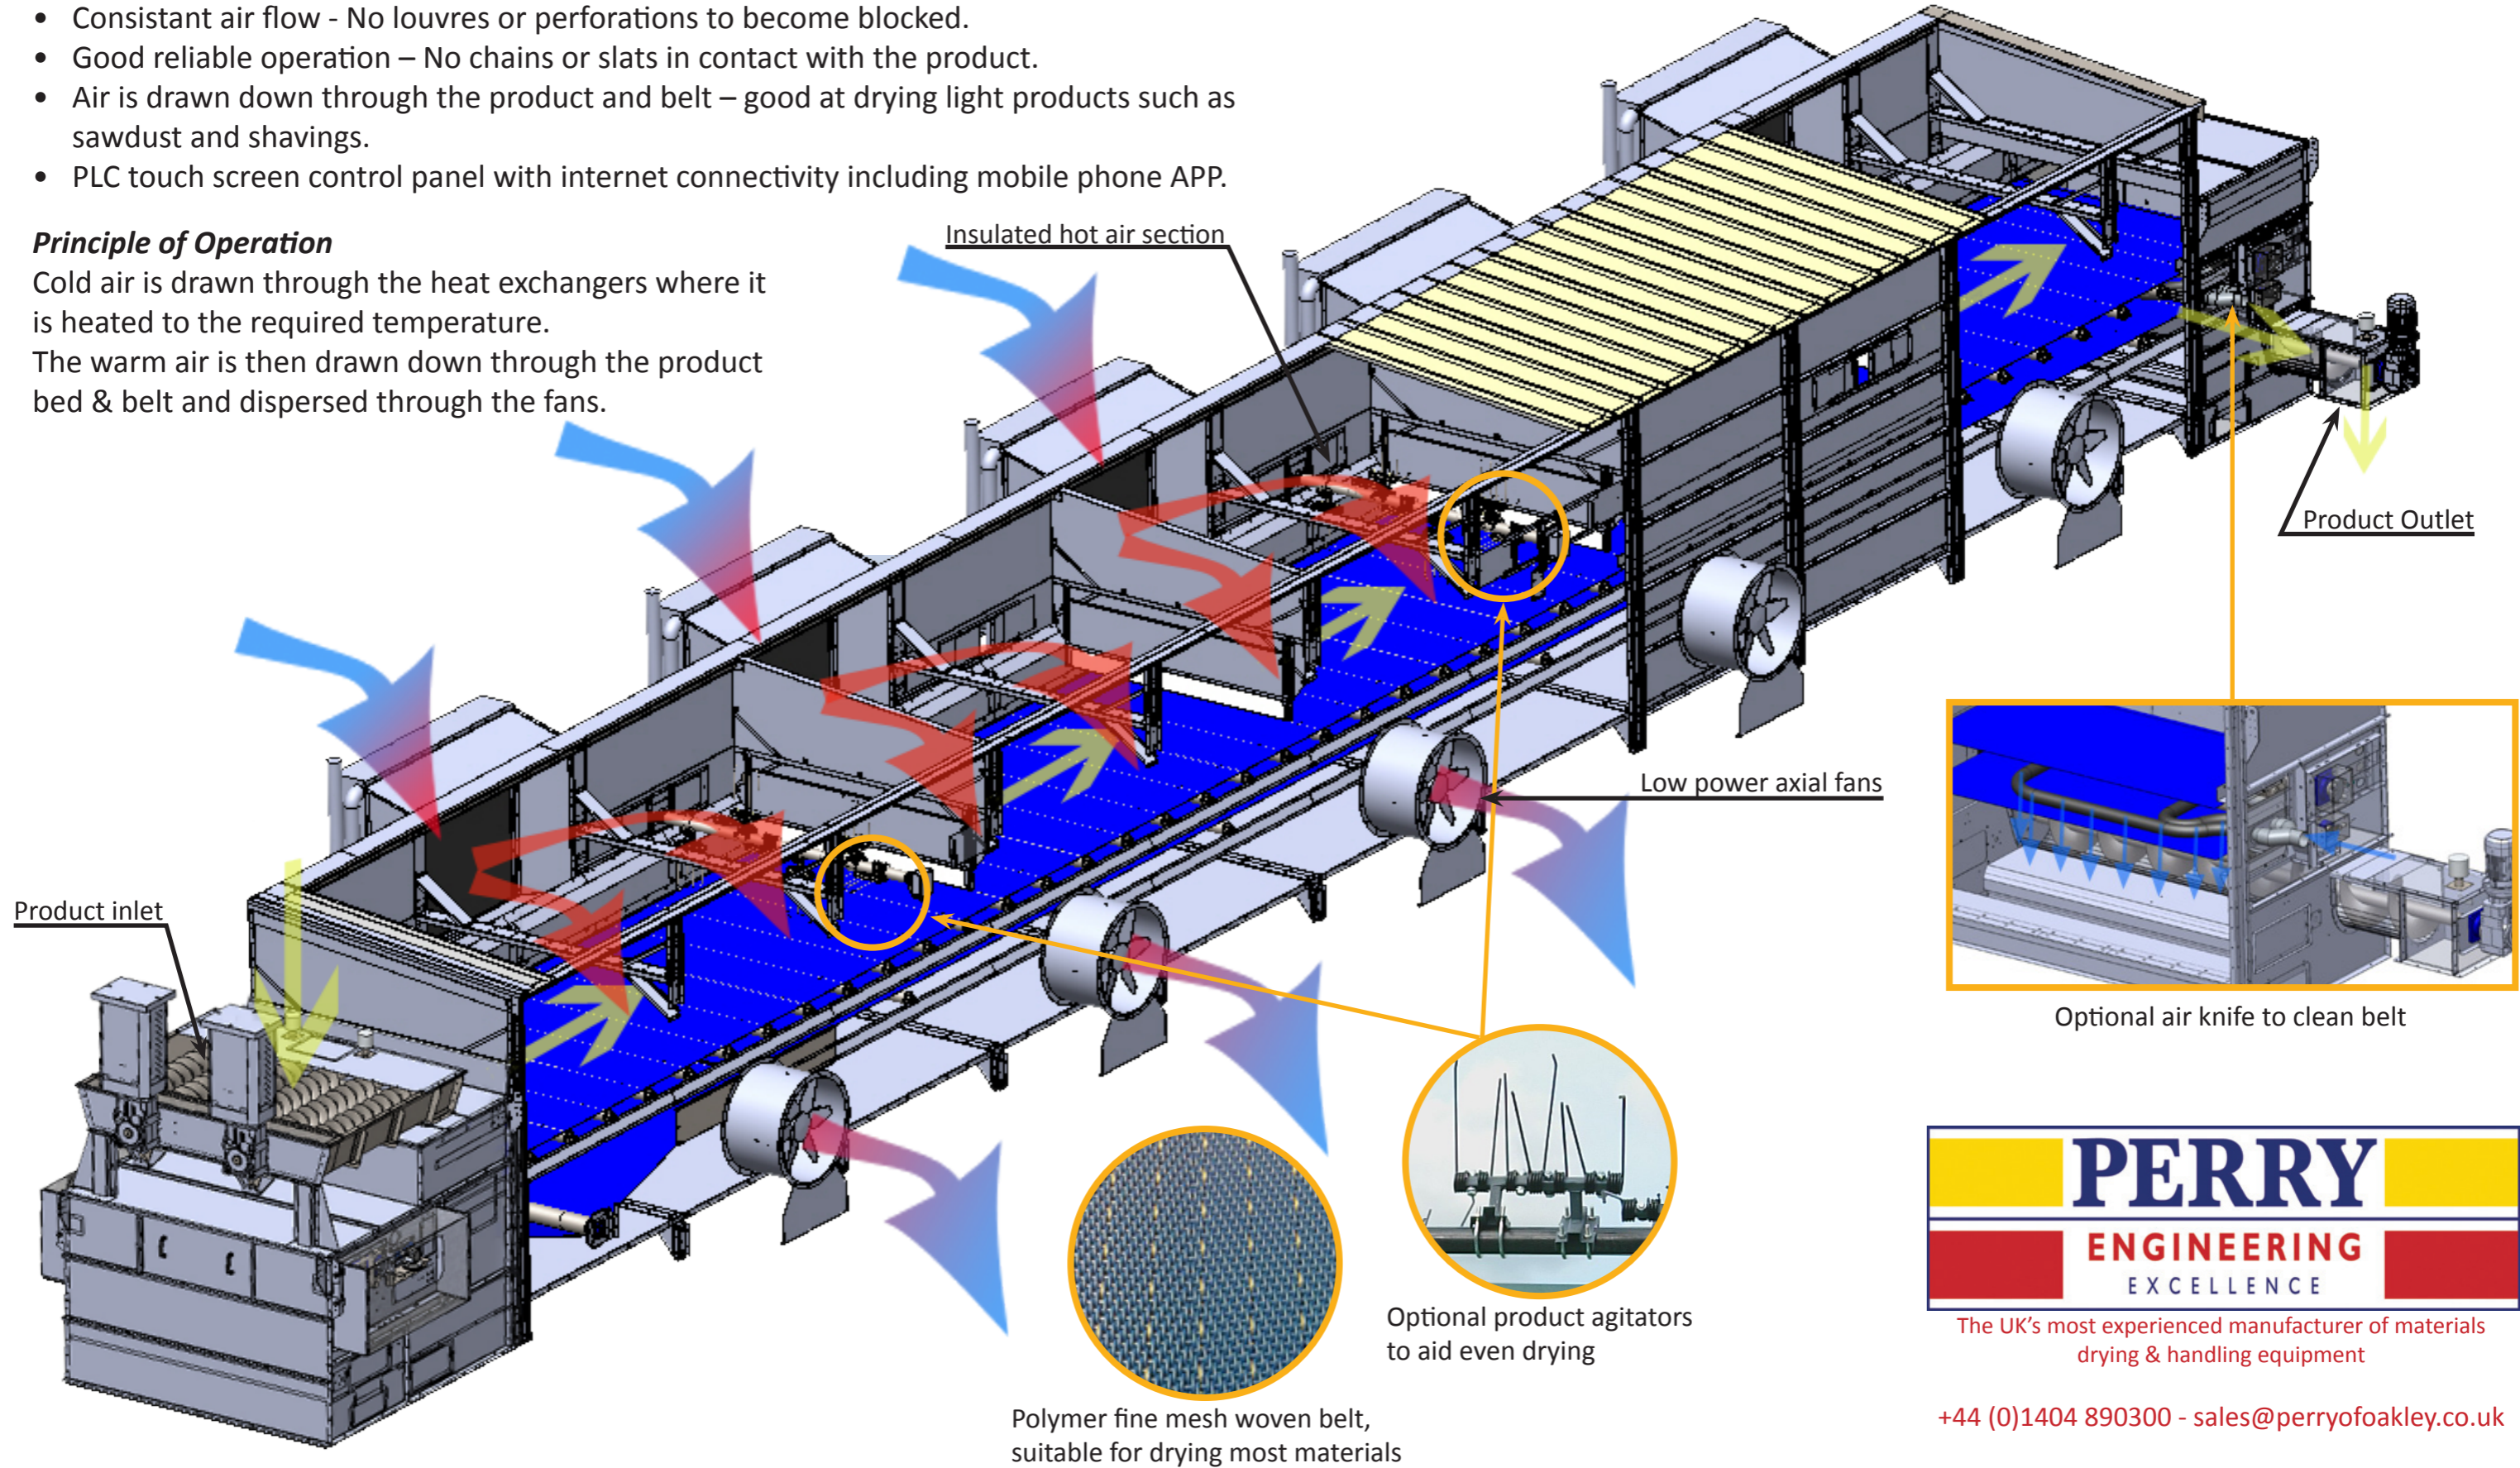

## Key Points:

- All galvanised construction.
- Modular design - Extend your machine at a later date.
- Flexible - One drier can dry many different products.
- Consistant air flow - No louvres or perforations to become blocked.
- Good reliable operation – No chains or slats in contact with the product.
- Air is drawn down through the product and belt – good at drying light products such as sawdust and shavings.
- PLC touch screen control panel with internet connectivity including mobile phone APP.

## Principle of Operation

Cold air is drawn through the heat exchangers where it is heated to the required temperature.

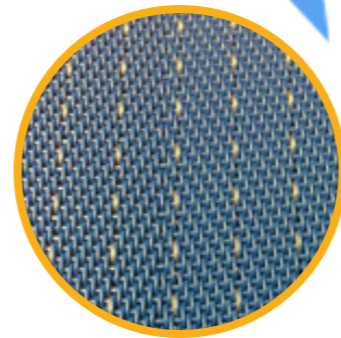

The warm air is then drawn down through the product bed & belt and dispersed through the fans.

Optional air knife to clean belt

Optional product agitators to aid even drying

Polymer fine mesh woven belt, suitable for drying most materials

The UK's most experienced manufacturer of materials drying & handling equipment
