

CAMELEON AUTOMATIC GRAIN SAMPLER 4000

Trade your grain at the right price

The samplers of series 3000 can still be ordered wherever 400 V 3-phase current is not available.

CAMELEON

The latest addition to the range of TPLG grain samplers, CAMELEON has been specially designed to meet the specific needs of sampling operations on tankers (rail or road), but is equally suitable for all other types of vehicles.

CAMELEON: tailor-made for silo trucks and rail cars.
CAMELEON can also be used on any other type of vehicle.

The straight vertical stroke of its probe provides precision and a high force of penetration. The movement is assisted by a variable frequency drive allowing the probe to dive as deep as 4 m even into high density products and powdery material. The longitudinal travel along a rail allows fast sampling of long vehicles with high accuracy.

TPLG adapt to your most specific requirements

CAMELEON can come with a gantry structure or rest on wall-mounted brackets.
Call us for any custom project.

NEW

Alternative mode

Like a car can «limp home» in semi-automatic mode, the sampler can operate the up/down and swivel drives even if the VFD fails. No down-time. Fixing or replacing the inverter is no longer a problem.
