

COBRA AUTOMATIC GRAIN SAMPLER 4000

Trade your grain at the right price

The samplers of series 3000 can still be ordered wherever 400 V 3-phase current is not available.

COBRA

Gantry-mounted Grain Probe

Smoothness, precision, safety, and speed, with the additional benefit of a coverage of the entire length of the trailer.

COBRA features the same technical, mechanical, and electronic specifications as Heron 4000. Its design using a carriage travelling along a gantry rail allows total coverage of long vehicles. It thus meets highest international standards:

NF EN ISO 24333 (2010-02)

TPLG adapt to your most specific requirements

Raised COBRA PREMIUM. The custom-made support structure allows free passage of high vehicles under the rail.

TPLG can offer solutions spanning much longer effective travel distances (30 m and more) to cover even the longest vehicle trains.

Surplus material recirculation back into the trailer (or any other location of your choice).

All our grain samplers can be fitted with this option which saves time and minimizes handling operations.

NEW

Alternative mode

Like a car can «limp home» in semi-automatic mode, the sampler can operate the up/down and swivel drives even if the VFD fails. No down-time. Fixing or replacing the inverter is no longer a problem.
